»Conformity declaration«

For materials used to produce a medical product, the German Medical Products Law (MPG – Directive 93/42/EEC) requires the certification of safety of the materials used with regard to

- toxicology and
- carcinogenity.

nora® products fully comply with these requirements of MPG. **nora**® products do not contain any toxicologically harmful and no carcinogenic substances as e.g. carcinogenic amines from azo dyes.

In addition, **nora**® products are certified by regular tests carried out by renowned test institutes and may bear the following quality seals:

- **skin tolerability certificate of the Institute Dermatest**
- **SG test mark "Schadstoffgeprüft"**
- **SG plus test mark**

A prerequisite for the use of the above mentioned quality seals is a continuous production monitoring by a quality management system. The certification according to DIN EN ISO 9001 guarantees the constant quality of manufacture, distribution, and marketing of the **nora**® products.

Confirmed in January 2019.
