

A profile for trendsetters: Sunflower

Modern, multilayered, with good grip and non-directional!

The **nora**[®] **Astro** soling sheets are made of cellular rubber that is specifically light, non-slip, abrasion-resistant and particularly suitable for orthopedic shoes, shoe modifications and repairs, suitable for modern shoes and **sporty sneakers**.

The "Star" profile has made **nora**[®] **Astro** popular and has been one of the most successful profiles in our range for decades. The "Geo" profile has also been very well received. Now it is time for another, unique profile which, as the name suggests, consists of sunflowers ...

The new **Sunflower profile 111** is modern, has good grip, is multilayered and offers safe tread. The **non-directional design** of the individual elements means that this soling sheet is very versatile in its usage. The type of profile prevents stones and dirt from getting stuck. The pattern as well as the colour selection are ideal for children, trendsetters, and **fashion-conscious and creative craftsmen**.

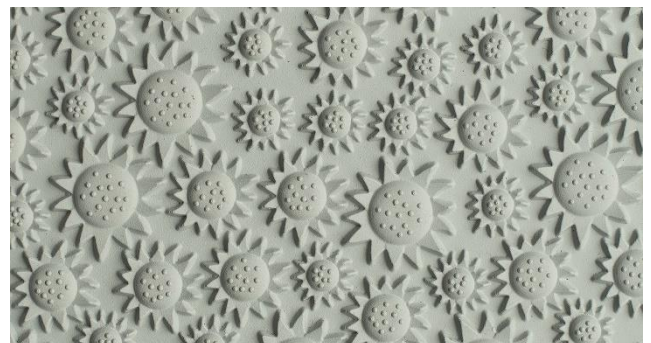

The "Sunflower" soling sheet is available in 5 mm thickness and five colours. Regardless of whether a **sporty, modern sneaker, a children's shoe or an orthopedic comfort shoe** is soled: this profile not only looks good but offers safe tread with particularly good grip characteristics.

nora[®] **Astro profile 111 Sunflower**

Soling sheets made of expanded rubber

Hardness:	approx. 50 Shore A
Density:	approx. 0,65 g/cm ³
Format:	approx. 910 x 520 mm
Thickn.:	approx. 5 mm
Colours:	376 deep blue, 368 grass green, 60 light grey, 70 yellow, 81 black

Processing notes: For sneakers and training shoes you often find rubber, EVA and/or TR is used for the soles. For adhesion we recommend a standard adhesive such as, for example, Renia Colle de Cologne. TR should be pretreated with RehaGol; Colle de Cologne should only be applied after a minimum waiting period of approx. 15 minutes.
