

» Declaration of clearance «

Under the MDR (Medical Device Regulation, EU Regulation 2017/745), materials used for the production of medical products must be provided, amongst others, with a *declaration of clearance* with respect to their toxicological properties.

✓ **nora**[®] products are free of constituents posing toxicological and carcinogenic risks as set down under EU Regulation 2017/745.

The closed-cellular surface structure of **nora**[®] materials also minimises the risk of harm to health in the form of germ and bacterial colonies and facilitates complete hygienic cleaning and disinfection.

Owing to their properties, **nora**[®] materials are suitable for the processing of Class 1 medical products.

nora[®] products undergo regular testing at renowned testing institutes and are certified to bear the following quality labels:

- *dermatological seal* of the Dermatest institute
- *SG tested for harmful substances* of the testing and research institute PFI Pirmasens
- *SG plus certification* (including tests on disinfectability and physical properties)

These requirements are fulfilled as a result of continuous production monitoring by an extensive *quality management system*. The ISO 9001:2015 certification safeguards unvarying quality in the manufacture, sales, and marketing of **nora**[®] products. This is supplemented with an *environmental management system* complying with ISO 14001:2015.

Confirmed in March 2021. Valid from 01/03/2021 to 31/12/2022.
